Moreover, MOMA Group has officialised the end of the first part of the installation of photovoltaic panels.

The works will bring a contribution in terms of energy from renewable sources and, consequentially, a reduction of energetic consumption.

Regarding the environmental benefits, the reduction of CO<sub>2</sub> emissions is equal to 210.905 Kg, which amount to around 6.295 trees planted.

“Another step towards sustainability” declares the CEO Renzo Vacondio, “Respecting the environment has always been a priority of ours: for years we have been investing continuously in improving the processes on all levels and we will not stop here”

## A ZERO IMPACT COMPANY

Moma is proud to underline its constant ecological commitment that has allowed the company to be internationally known as a zero environmental impact firm, since 1996.

This goal could only be achieved thanks to the continued investment throughout these years, in order to guarantee a CO<sub>2</sub>/M<sup>2</sup> reduction of more than 20 times.

We are proud that MOMA has been awarded, as one of the first, unique companies, to have invested in the most efficient equipment, for air filtration, constant water cleaning, and glaze recycling.

MOMA is dedicated to less waste for a cleaner environment.

*A COMPANY FOR THE PRESENT,  
AND THE FUTURE.*
